As a resident of Brackett Road, I am opposed to any large scale residential development along this narrow rural country lane. The proposed change from agricultural to dense residential would put a substantial strain on Brackett Road and increase the risk of injury to those of us who live here. The intersection of Brackett Road and Emory Road has been the scene of several very serious accidents and would become even more dangerous with the increase of traffic making left hand turns from Emory. The intersection at the other end of Brackett Road with Bell Road is a disaster waiting to happen! This has to be the worst blind left turn onto Bell in Knox County. Increasing the volume of traffic on Brackett Road will hasten this disaster. Currently vehicles travel on Brackett Road at excessive speeds when using it as a short cut to Bell Road. This creates a dangerous situation with slow moving farm equipment that frequents the road.

Before increasing the risk of serious traffic accidents by increasing the number of homes by a sizeable amount, the MPC should address the improvements needed on Brackett Road before increasing the volume of traffic on this rural byway. Thank you for your consideration of these concerns.

Sincerely,

Pat Needham
