

I respectfully ask you to reconsider this proposal as this is will be over crowding to our school systems, and take away our wooded areas that make this world go round. These roads are constantly packed and have lines down them due to the amount of people already here. Our roads and our school system will not be able to handle the amount of people this will bring to the area.

When I bought my house I liked that the area wasn't all city over here, just some nice neighborhoods with crime that wasn't high. Bringing more people into this area will also increase more crime than there already is, this can put a strain on our police department. Our businesses are not equipped to handle a new influx of people as there is already stock issues. Our wildlife habitats will be taken from them along with the calmness of the area.

There needs to be changes made with our roadway systems. Millertown pike sees so much congestion due to people traveling to tazewell pike and so forth. There is already an apartment building over by Home Depot on Washington Pike, there is no need to add even more congestion than that will cause. You're asking for an absolute night mare and hell for us locals, School systems, emergency systems and utility systems and more to have to deal with day in and day out.

Buffat mill and loves creek are terrible to be driving on especially while raining, this is asking for an increase of car accidents as well as fatalities due to congestion of people in the area. You will be destroying my families and many other families back yard and homes, and everything we love about our neighborhood. Rutledge pike already sees so much congestion as well and this will only increase if this build is proceeded. There needs to be a lot more to come into consideration, it's not all about the money you're making off of this, this is destroying our earth and our ecosystem to a point where we won't exist anymore.

This is and will cause more of an over population to the area, we will be sitting on top of each other and there will be nothing left to have anymore. This will create such a high demand on every supply we have in our area to a point that it will drive prices up and we will look like California. This area is not equipped to handle this type of population increase.
