

As a homeowner in the Everett Woods neighborhood, I strongly oppose the proposed apartment complex planned across from our neighborhood. While growth and development are inevitable, this particular project raises serious concerns regarding safety, infrastructure, and environmental impact.

First, the surrounding roads were not designed to handle the significant increase in traffic that a high-density development would bring. Increased congestion will not only create daily inconvenience for residents but also raise safety risks for families, school buses, pedestrians, and emergency response vehicles that rely on safe and efficient road access.

Additionally, this area currently supports local wildlife and natural green space that would be disrupted by large-scale construction. The loss of habitat and increased human activity could displace wildlife, increase roadway animal incidents, and negatively impact the character and ecological balance of our community.

There are also concerns about strain on existing infrastructure, including drainage, utilities, and public services, which may not be adequately equipped to support rapid population growth without careful planning and upgrades.

We respectfully ask decision-makers to consider the long-term impact this development would have on traffic safety, environmental preservation, infrastructure capacity, and the overall quality of life for current residents. Thoughtful growth should prioritize compatibility with existing neighborhoods, proper infrastructure planning, and preservation of the natural environment that makes this community a desirable place to live.

Sincerely,

Olivia Greenway
